How to integrate Wishlist Plus with Boost AI Search & Discovery

V2

V3

About Wishlist Plus

1 **About Wishlist Plus**

- Wishlist Plus enables customers to bookmark their favorite products and pick up where they left off when they return.

- App details: https://apps.shopify.com/swym-relay

2 **Wishlist Plus Integration Function**

- Provide an Add to Wishlist button/icon on every page on product items while navigating the right product.

How to integrate Wishlist Plus with Boost AI Search & Discovery

> *This feature **only** works with **Boost AI Search & Discovery V2** and above. To find out which version of our app your store's current theme is installed with, please follow this article.*

1 From your Shopify admin, go to **Online Store** › **Themes**.

2 Find the theme you'd like to integrate the app and click **Actions (⋯)** › **Edit code**.

> *Select one of the Versions below for the app version that your theme is installed with (if you have not known it, yet, please follow this article to find out): V2 or V3. Then follow its corresponding **Step 3**.*

V2

**3 (V2)** In **Asset** folder, search for this file **boost-pfs-custom.css.liquid**.

🔍 boost-pfs-custom.css.liquid ✕

▶ 📁 Layout

▶ 📁 Templates

▶ 📁 Sections

▶ 📁 Snippets

📁 Config

▼ 📁 Assets

```
⊞  Add a new asset
{/}  boost-pfs-custom.css.liq...  🗑  ✏
▶ 📁 Locales
```

4 (V2) Copy this code snippet and paste into the file (make sure it doesn't intervene with any existing codes inside the file by pasting it into a new line)

```
// For boost-pfs-custom.css.liquid
.boost-pfs-filter-products  .swym-button.swym-add-to-wishlist-view-product:not(.swym-loaded){
display: none;
}
```

5 (V2) Next, go to **boost-pfs-filter.js** file, locate this line of code:

```
productGridItemHtml
```

6 (V2) Copy and paste this code snippet to where you'd like to add your Wishlist:

```
'{{itemWishlist}}' + //For boost-pfs-filter.js
```

For example, under the product thumbnail:

```
18    'productGridItemHtml': '<div class="grid__item {{itemGridWidthClass}}">' +
19                '<div class="grid-view-item {{itemSoldOutClass}}">' +
20                    '<a class="grid-view-item__link" href="{{itemUrl}}">' +
21                    '{{imageStyle}}' +
22                    '{{itemImages}}' +
23                    '{{itemWishlist}}' +
24                    '<div class="h4 grid-view-item__title">{{itemTitle}}</div>' +
25                    '{{itemVendor}}' +
26                    '<div class="grid-view-item__meta">{{itemPrice}}</div>' +
27                '</a>' +
28            '</div>' +
29        '</div>',
```

If the variable **productGridItemlHtml** does not exist in **boost-pfs-filter.js**, please find it in the file **boost-pfs-filter-html.liquid** and paste this code snippet instead:

```
[[itemWishlist]] //For boost-pfs-filter-html.liquid
```

```
boost-pfs-filter-html.liquid  Older versions                            Delete file   Rename
1   {%- capture bc_layout -%}
2   {%- case layout -%}
3   {%- when 'productGridItemHtml' -%}
4   <div class="boost-pfs-filter-product-item boost-pfs-filter-product-item-grid [[gridWidthClass]][[soldOutClass]][[saleClass]] [[itemActiveSwapClass]]">
5       <script class="boost-pfs-filter-product-script" data-id="boost-pfs-product-json=[[itemId]]" type="application/json">[[itemJson]]</script>
6       <div class="boost-pfs-filter-product-item-inner">
7           <div class="boost-pfs-filter-product-item-image">
8               <a href="[[itemUrl]]" class="boost-pfs-filter-product-item-image-link">[[itemImages]]</a>
9           </div>
10          <div class="boost-pfs-filter-product-item-label">[[itemLabels]][[itemTagLabels]]</div>
11          <div class="boost-pfs-filter-product-item-bottom">
12              <a href="[[itemUrl]]" class="boost-pfs-filter-product-item-title">[[itemTitle]]</a>
13              [[itemVendor]]
14              [[itemReviewHtml]]
15              [[itemPrice]]
16              [[itemColorSwatches]]
17              [[itemWishlist]]
18          </div>
19      </div>
20  </div>
21  </div>
```

7 (V2) In **boost-pfs-filter.js** file, locate this line of code:

```
ProductGridItem.prototype.compileTemplate
```

8 (V2) Within the function **ProductGridItem.prototype.compileTemplate**, scroll down to locate this comment line:

```
// Add main attribute
```

9 (V2) Copy and paste this code snippet above the comment line:

```
/* Swym integration */
var itemWishlistHtml = '<button data-with-epi="true" class="swym-button swym-add-to-wishlist-view
-product wishlist swym-button product_' + data.id + '" data-swaction="addToWishlist" data-product
-id="' + JSON.stringify(data.id) + '" data-variant-id="' + data.variants[0].id + '" data-product-
url="' + boostPFSConfig.shop.url + Utils.buildProductItemUrl(data, false) + '"></button>';
itemHtml = itemHtml.replace(/{{itemWishlist}}/g, itemWishlistHtml);
```

10 (V2) Continue to locate this line of code:

```
ProductList.prototype.afterRender
```

11 (V2) Copy and paste this code snippet into the function **ProductList.prototype.afterRender**

```
/** End Swym integration **/
document.dispatchEvent(new CustomEvent("swym:collections-loaded"));
```

12 (V2) Create a Snippet called '**swym-custom**' and add the following code (infinite / dynamic scrolling pages only):

```
<script defer>  function swymCallbackFn(swat){
// your API calls go here
document.addEventListener("swym:collections-loaded", function(){
swat.initializeActionButtons("<<Collections Product Grids Parent Selector>>");    })  }
if(!window.SwymCallbacks){
window.SwymCallbacks = [];
}
window.SwymCallbacks.push(swymCallbackFn);
</script>
```

💡 Replace the <<*Collections Product Grids Parent Selector*>> **from the code snippet above** by locating the selector from your Store's front end of the collection's Product grids container:
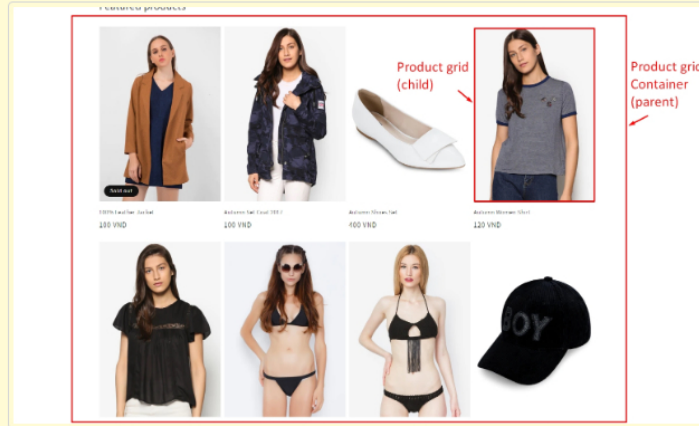

You can locate it by going to your store's front end > Right click on the page > Inspect.
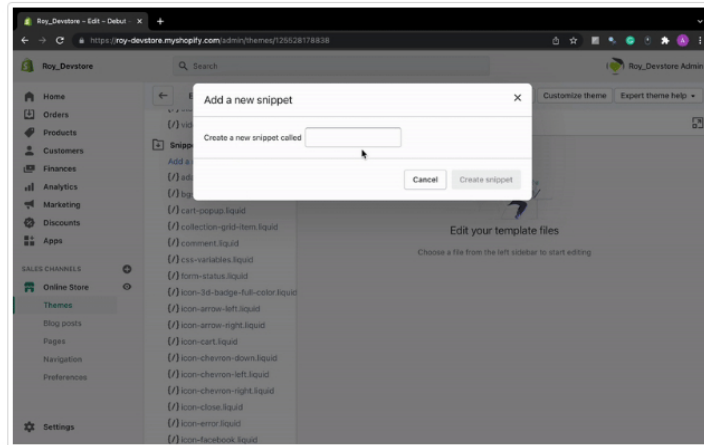

13 (V2) Add the following include code to your **theme.liquid** file.

```
{%include 'swym-custom'%}
```

We recommend that you add this just below the **swym-snippet** file as shown below.
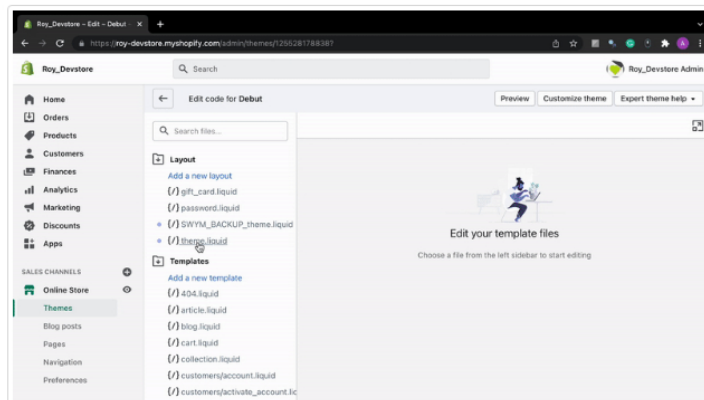

14 (V2) Click **Save** and you're set!

You can find more details in **Swym** document in the link below:
https://swym.it/help/add-wishlist-button-to-your-collections-page-2/

V3

3 (V3) In **Asset** folder, locate a file named **boost-sd-custom.js**.

4 (V3) Add the code snippet below to the **boost-sd-custom.js** file:

```
if (window.boostSDAppConfig) {
window.boostSDAppConfig.integration =  Object.assign({
wishlists: 'plus'
}, window.boostSDAppConfig.integration || {});
}
```

5 (V3) Click **Save** and you're all set!

If you encounter any issues during the integration process, please don't hesitate to contact our support team for further assistance at support@boostcommerce.net.
